

Kirsch® Automation

ENABLING APPLE HOMEKIT QUICK START GUIDE

Before You Begin:

In order to enable Apple® HomeKit®, you'll need:

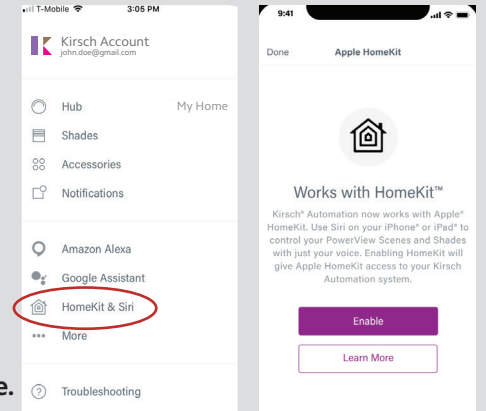

- A Kirsch® Automation Hub, updated with the latest firmware
- A HomeKit setup code (located on the bottom of the Kirsch Automation Hub)
- An iPhone® or iPad® with the latest version of iOS
- The Apple Home app downloaded and installed on your iPhone or iPad

Tips

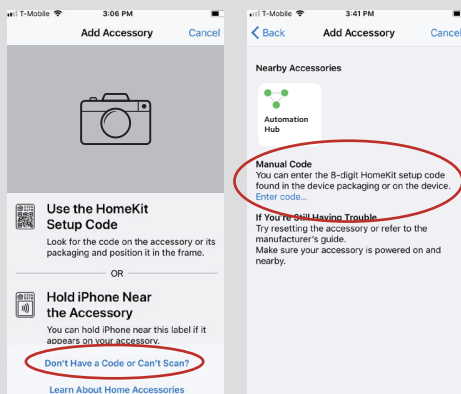

- Use of the Kirsch Automation Remote to control automated shades integrated with Apple HomeKit is not recommended. For optimal system performance, the Apple Home app and Kirsch Automation App are the recommended control options.
- Complete all Shade, Room and Scene configuration in the Kirsch Automation App prior to enabling HomeKit and using the Home app.
- If any changes to Shade and/or Scene information are made in the Apple Home app, you may need to confirm those changes and resolve any conflicts the next time you open the Kirsch Automation App.
- Once HomeKit is enabled, it is recommended that the user who added the Kirsch Automation Hub to their HomeKit home share access with family members using the Home app. This ensures everyone in the home can use Siri, and that all changes stay in sync.

1 Open the Kirsch Automation App on your iPhone or iPad, access the menu and select HomeKit & Siri.

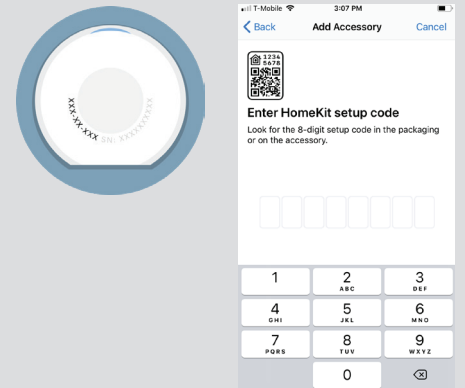

Select Enable.

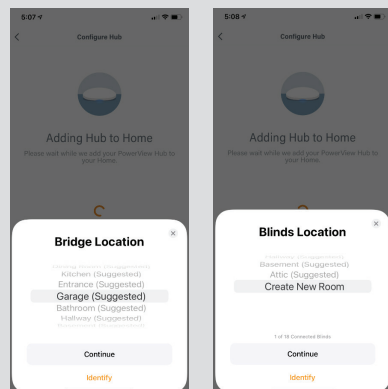

2 Select the option to manually enter the HomeKit setup code.

3 Locate the setup code on the bottom of the Kirsch Automation Hub and enter it as indicated.

4 Place the hub and each window treatment in the appropriate room.

5 Follow the steps in the Kirsch Automation App to complete the integration. You will:

- Add your Kirsch Automation Hub and Shades to HomeKit as accessories.
- Synchronize all Shade, Room and Scene data between the Kirsch Automation and Apple Home apps.
